Global Watch Weekly Report

Welcome to the Global Watch Weekly Report

Dear Global Watch Weekly Member

“The heavens declare the glory of God; the skies proclaim the work of his hands” (NIV).

This beautiful statement from Psalm 19:1 (NIV) indicates one of the purposes of the created universe: the universe reveals the majesty of its Creator. Of course, God’s glory can be seen in many different aspects of creation—not just the heavens. Consider the magnificent intricacy of a living cell, the complexity and the amazing diversity of life on earth, and the mathematical precision of the laws of physics and chemistry. These are all indicative of the incomprehensible creativity, intelligence, and power of the Creator.

Why then does the Bible single out the heavens as declaring His glory? Perhaps the heavens declare God’s glory in a special way or to a greater extent. It may even be that the starry universe was specially designed for the purpose of declaring God’s glory to us. We will see that the universe has incredible beauty. This alone would be sufficient reason to praise God for His creation, but not only did God make the universe beautiful, He made it unimaginably large. The range of scales in the universe is truly staggering. The universe contains objects of incredible size and mass at distances which the human mind cannot fully grasp. When we consider the power of the Lord who made all this, we cannot help but feel humbled. Truly, the God who created this universe is glorious and worthy of praise.

So when incredible structures are found in the universe how are we supposed to react? Whilst the secular world may point to it as a sign of alien intelligence shouldn't we delight in the fact that such structures are a part of Gods handiwork? This may seem like a tongue in cheek question but it does raise up the huge debate on *“Are we alone in the universe?”* or *“Could God have created other civilizations outside of the earth realm?”*,

As we delve into this debate one thing we know for sure is that the universe is far more complex than our attempts to humanize the universe in order for it to make sense to us. One of the things about the human mind is that we don't like never ending loops. We would prefer to have answers rather than unanswered questions. From a biblical perspective this can provide security rather than a subject being open to all kinds of interpretation and fanciful imagination of self proclaimed prophets, seers and home made theories. But the underlying danger is that it also can provide inflexibility when biblical interpretation comes face to face with the reality of the universe we live in. Sometimes managing and balancing these two modes can be extremely difficult.

The recent finding of an incredible phenomena light years away from earth forms the basis of this weeks *Global Watch Weekly report*.

Enjoy.

UNIVERSAL MYSTERIES

INTRODUCTION TO KIC 8462852

The search for signs of life in a mysterious star system hypothesized to potentially harbor an “alien megastructure” is now underway. Astronomers have begun using the *Allen Telescope Array (ATA)*, a system of radio dishes about 300 miles (483 kilometers) northeast of San Francisco, to hunt for signals coming from the vicinity of *KIC 8462852*, a star that lies 1,500 light-years from Earth.

NASA’s Kepler space telescope found that *KIC 8462852* dimmed oddly and dramatically several times over the past few years. The dimming events were far too substantial to be caused by a planet crossing the star’s face, researchers say, and other possible explanations, such as an enormous dust cloud, don’t add up, either.

The leading hypothesis at the moment involves a swarm of comets that may have been sent careening toward *KIC 8462852*, possibly after a gravitational jostle by a passing star. But it’s also possible, astronomers say, that the signal Kepler saw was caused by huge structures built by an alien civilization — say, a giant assortment of orbiting solar panels

THE INSIDE DETAILS

After more than four years of observations with the Kepler Space Telescope, astronomers reveal that this bizarre star called *KIC 8462852* has unexplained objects orbiting around it.

The star, located 1480 light-years from Earth, was flagged in 2011 by citizen scientists recruited by the Kepler’s Planet Hunters program. The “interesting” and “bizarre” star was emitting light patterns stranger than any of the other 150,000 stars Kepler was watching.

Scientists spotted strange changes in light deep in space — which some claim might be a huge alien power station.

The huge cluster of objects has been said by scientists to be so strange that they have very little idea what it is. And some have speculated that it could be a swarm of megastructures built by aliens, while others say it might be one of the biggest clouds of space dust ever seen.

The reports originate from findings about the star *KIC 8462852*, which has been watched by the Kepler space telescope, which looks for other planets like ours. It sees planets by watching for variations in the light that would be seen as they cross their star — but when it spotted the light from the newly-famous star, the data didn’t seem to indicate something planet-shaped.

“We’d never seen anything like this star,” Tabetha Boyajian, a postdoc at Yale and overseer of Planet Hunters, told *The Atlantic*. *“It was really weird. We thought it might be bad data or movement on the spacecraft, but everything checked out.”*

Where repeated dips in light are often shadows cast by transiting planets, bizarre fluctuations in the light *KIC 8462852* emits indicate that there is “an unexplained mess of matter” circling it in tight formation.

Boyajian published a paper in journal *arXiv* on the mature star’s strange light pattern, exploring a number of “natural” explanations.

UNIVERSAL MYSTERIES

These include faulty data, instrument defects, an asteroid belt pileup or a recent planetary collision.

While most of the theories don't fit the data, according to the paper, one scenario involving exocomets is the most likely.

"By considering the observational constraints on dust clumps orbiting a normal main-sequence star, we conclude that the scenario most consistent with the data in hand is the passage of a family of exocomet fragments, all of which are associated with a single previous breakup event," the paper states.

Other astronomers studying the star have alternate scenarios for its strange light fluctuations. One theory says the star may harbour giant structures built by a possible advanced technological civilization.

Penn State University astronomer Jason Wright is publishing a paper based on the star that proposes its light pattern may correlate with a "swarm of megastructures," possibly constructed to harvest energy from the star.

"When [Boyajian] showed me the data, I was fascinated by how crazy it looked," Wright told *The Atlantic*. *"Aliens should always be the very last hypothesis you consider, but this looked like something you would expect an alien civilization to build."*

Boyajian is writing a proposal with Wright and Andrew Siemion, Director of the Berkeley SETI Research Centre, to direct a massive radio dish at the star to study its radio waves.

If frequencies suggesting technological activity are observed, a follow-up observation would happen with the Very Large Array (VLA) in New Mexico to further study if the waves were from a technological source.

"If we saw something exciting, we could ask the director for special allotted time on the VLA," Wright said. *"And in that case, we'd be asking to go on right away."*

If it is an alien megastructure, then the most likely reason for building it would be to construct a Dyson sphere — a huge shell structure that would sit entirely round a star, collecting all of the energy that comes out of it.

The idea of a Dyson sphere began as a thought experiment, based on the idea that technological civilizations gradually look to harness more energy. The ultimate end of that gradual process would be looking to harness all of the energy from its sun — and the best way to do that would be build a huge sphere around the star, collecting it through an advanced form of solar panel or similar.

Some have pointed out that any possible Dyson sphere around the *KIC 8462852* star must be so far incomplete — it is still letting light through, which is the only way we can see it. But it might in fact have been completed already, since the star is 1400 lightyears away and so our current information about it is hundreds of years old.

The Kardashev scale is a way of measuring the technological advancement of a certain civilization. It is based on the idea that as civilizations become more — first, they will collect energy from their planet, then from their star and eventually from their galaxy.

The Dyson sphere would be an example of a way that such a civilization could collect energy from their star.

UNIVERSAL MYSTERIES

The Dyson sphere is named after Freeman Dyson, a theoretical physicist who popularized the idea but has said that he wished it didn't have his name.

Scientists hope that they can find out more about the strange signal as further information comes back. Scientists didn't see anything the last time around, in April 2015, but the next dipping events are expected to occur in May 2017 — when they are hoping to see more of whatever is getting in the way of the star.

THE REVIVAL OF SETI

In July 2015 Russian billionaire philanthropist Yuri Milner announced that his Breakthrough Prize Foundation would donate \$100 million over the course of 10 years to fund the biggest Search for Extraterrestrial Intelligence (SETI) project ever attempted. Prior to this, the field of SETI had effectively been the pauper of the astronomical sciences, shorn of government funding and limping along thanks only to the generosity of public and private donations. At best, its global annual funding was \$1.5 million. With Milner's millions, everything has changed.

"This is the biggest infusion of money for SETI since the NASA SETI program, which was terminated by Congress in 1993," says Seth Shostak, the senior astronomer and director of the research division at the SETI Institute, one of the world's most prominent centers for SETI research, nestled in California's Silicon Valley. *"So, of course this is a major boost to the search."*

The Breakthrough Listen project, as it is known, intends to direct some of the largest radio telescopes in the world on a decade-long mission to find evidence of intelligent life.

This is in stark contrast to where SETI had been headed. With no money, the opportunity to fund telescope time and manpower to conduct and analyze searches was growing increasingly limited and two of SETI's chief observatories, *Green Bank and the Arecibo Observatory in Puerto Rico*, were on the National Science Foundation's chopping block to cut costs.

Yuri Milner's money will go a long way toward helping Green Bank win a reprieve, although the future of Arecibo remains in more serious doubt.

"Frankly we're getting incredible value in terms of telescope time; the Green Bank telescope is a \$125 million telescope," says astrophysicist Andrew Siemion of the *University of California, Berkeley*, who is one of the directors of the Breakthrough Listen project. *"It's a world-class radio telescope in every sense of the word and we're getting it for pennies on the dollar."*

Siemion hints that more announcements in the Breakthrough project are still to come, but at the *SETI Institute*, Shostak and his colleagues are running their own project on their own radio observatory, the *Allen Telescope Array (ATA)*. This is a network of 42 radio dishes dedicated to searching the skies for radio signals from extraterrestrial civilizations, but which is also used for regular astronomy too.

UNIVERSAL MYSTERIES

TIMING THAT IS SO SCRIPTED

Its like watching a performance where you know the end game whilst the script is still in motion. Don't you find it a big coincidence that this finding of the *KIC 8462852* coincides with reports three weeks ago, that signs of water had been found on Mars creating the excitement about the possible building blocks of life on the red planet.

For decades disclosures groups have been pressuring the US government to reveal its hand on the existence of extra terrestrial contact. For instance Dr Steven Greer, Head of *the Disclosure Project*, believes that the earth has been visited by

advanced Inter-Stellar Civilizations that can travel through other dimensions faster than the speed of light. They use energy propulsion systems he believes can bring us to a new era. He believes that humans have also developed these systems but those in power have suppressed them in order to keep us at the mercy of fossil fuels.

Could it be that disclosure is coming by desensitizing people in an indirect way. Coming out directly tomorrow and saying that UFOs are real and that aliens are visiting earth is something that would send the earth into a tail spin of mass hysteria. History has proven that civilizations cope best with a gradual transition of new paradigms rather than a shock therapy method.

Thus planting the seed of possible alien existence by talking about water being on mars and strange physical structures being found light years away is a strategy which plants a seed for moving humans to an eventual recognition of a phenomenon outside our normal every day life.

ARE WE SAYING ALIENS EXIST?

Before you start ranting and raving that we are promoting the idea that aliens exist we would want to clear up that we in our frail humanity and limited understanding of the universe could never

ever make a sweeping statement that we know everything about the universe. However what we can confidently assert is that the UFO phenomenon and the interaction of extraterrestrial beings with the human race is clearly supernatural and demonic and has nothing to do with some far way civilization travelling all the way to earth.

Also it makes sense to define what one is meaning by alien. The normal definition would apply to the imagery painted by alien abduction cases, reports from whistle blowers who have worked on unclassified military and secret government projects and Hollywood movies such as Independence Day, The Fourth Kind, ET and the X Files.

DID JESUS CREATE OTHER WORLDS

In the book of Hebrews it states that Jesus made the worlds. The use of the plural worlds as opposed to the world (as we know it) seems to indicate at first glance that there are other worlds in the universe.

Hebrews 1:2 (NKJV) "has in these last days spoken to us by His Son, whom He has appointed heir of all things, through whom also He made the worlds."

Hebrews 11:3: "Through faith we understand that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear."

This is why groups such as the *Church of Jesus of the Latter Day Saints* believe there are other inhabited planets in the universe. In the *Book of Mormon* it states

"And behold, the glory of the Lord was upon Moses, so that Moses stood in the presence of God, and talked with him face to face. And the Lord God said unto Moses: For mine own purpose have I made these things. Here is wisdom and it remaineth in me. "And by the word of my power, have I created them, which is mine Only Begotten Son, who is full of grace and truth."

"And worlds without number have I created; and I also created them for mine own purpose. ..." "But only an account of this earth, and the inhabitants thereof, give I unto you. For behold, there are many worlds that have passed away by the word of my power. And there are many that now stand, and innumerable are they unto man; but all things are numbered unto me, for they are mine and I know them."

UNIVERSAL MYSTERIES

There are also other groups outside of the Mormons such as groups within the *Worldwide Church of God* movement who believe God does have life on other planets, but that God has made the distances between us so great that we will never be able to see or realize their existence before Earth's time runs out. In other words, we have been quarantined from other worlds because of our fallen sinful state.

But what does the word “world” mean in the context of Hebrews and as Christians are we supposed to accept the fact that outside of Heaven itself and the domain of Satan and his fallen angels there is no other intelligent civilization in the universe?

The word ‘worlds’ appears in the Kings James Version Bible translation and some others, and some claim that it refers to other inhabitable planets. However, the word is αἰών (aiōn), from which we derive the word ‘eons’. Thus modern translations render the word as ‘universe’ (entire space-time continuum) because it correctly describes ‘everything that exists in time and space, visible and invisible, present and eternal’.

It should also be remembered that expressions like “the heavens and earth” (Genesis 1:1) are a figure of speech known as a merism. This occurs when two opposites or extremes are combined to represent the whole or the sum of its parts.

For example, if I said “*I painted the whole building from top to bottom.*” One would understand this to mean everything in the whole building. Similarly, biblical Hebrew has no word for ‘the universe’ and can at best say ‘the all’, so instead it used the merism “the heavens and the earth”. It is clear that New Testament passages like the aforementioned Romans 8:18–22 and Hebrews 11:3 are pointing back to the Genesis (“heavens and earth”) creation, and thus, everything that God made and when time as we know it began.

Throughout the Bible (e.g. Genesis 14:19,22; 2 Kings 19:15; Psalm 121:2), ‘heaven(s) and earth’ means the totality of creation, not just the Earth and its atmosphere, or our solar system alone. It

is used because Hebrew has no word for ‘the universe’ and can at best say ‘the all’. Subsequent revelation would include the angels as part of this creation, as they are clearly stated to be created beings, e.g. Colossians 1:16:

FUTURE WORLDS - POSSIBLE

The Bible reveals God as being geocentric. In all the universe his focus is squarely on the earth. This is where Jesus came and will return. This is the location of the New Jerusalem and not some other place.

In his book *God and Science: Coming Full Circle*, author James Molben respects both views:

If life is plentiful in the universe, we may all benefit from being spread out over such a great distance. If we are unique, the whole cosmos might just be one massive blackboard, filled with moving data points for us to study and learn from.

Regardless, the Earth’s uniqueness suggests that mankind is far more significant than many realize. Not only does God love us—He also values us. We are precious to Him beyond human comprehension. However if beyond our understanding and level of Revelation God has created other civilizations in far distant parts of the universe we find it hard to accept that there would be some level of communication and interactions between our world.

However we do have more certainty that the wonders of space and the significant vastness of space will have some application in the future when we move into eternity after the creation of the new heaven and the new earth.

Could it be that what we see in the physical as planets of rock, burning stars and incredible phenomena (i.e. Dyson structures) in the universe actually take on a completely different meaning and perception once we move into eternity in a non fallen state? Is what we see in the universe right now something that has a completely different visual perspective when we are in a non fallen state? This is highly probable yet hardly mentioned by bible researchers within an interest in astronomy.

UNIVERSAL MYSTERIES

AN EXTRACT FROM THE FALL OF LUCIFER

The idea of the universe actually representing something completely different in the spiritual realm was an idea that I saw in Wendy Alec's *Chronicles of Brothers Series*. In the first book of this series called *The Fall of Lucifer*, the fictional book seeks to paint a picture of what transpired in the dateless past before the creation of the human race when it was the angelic realm which was the center of God's purpose.

In Chapter Two entitled *the Inauguration*, there is a scene where millions of angels in heaven are gathered for a special ceremony where God himself comes down into their midst. Watch for what it says about the stars and planets in reference to the arrival of God Yehovah.

"Lucifer stood in the high place, his arms raised in abandoned worship to Yehovah, his face bathed in the blinding, shimmering light.

He turned to the millions of the prostrate angelic host and lifted his sceptre, his purple velvet robes billowing. A great oration came forth from his lips, and the sound was as the sound of celestial pipes and of flutes and of clarinets and of every pipe ever heard in the universe. In response a great song of adoration and worship burst forth from the heavenly host.

"Lucifer lifted his sceptre. 'All hail Yehovah!' Lucifer's voice rose above those of the angelic host. The entire assembly rose, their heads bowed, their arms outstretched. Immediately, the entire chamber reverberated with the sound of angelic voices. 'All hail Yehovah!'

A great rumble of thunder issued from the throne, through the mist – the roar of a thousand waters.

All at once it was as if aeon upon aeon of galaxies descended through the open dome as Yehovah's feet descended. And with the descent, a great and terrible roaring filled the chamber. It was as though the suns and the moons and stars from millions upon millions of galaxies were woven as a living, pulsating tapestry of the cosmos that cloaked His being. From each moon and planet and from the millions of stars that

radiated from the translucent cloak of His radiance resounded light waves that oscillated through universe after universe – a tsunami of sound.

The Ancient of Days descended into the chamber amid the thunder and lightning, and as He did, the blazing white light of the chamber was replaced with a dazzling amethyst light, which turned to emerald and then sapphire – the spectra of light reflected in Yehovah's mantle. As He descended a rainbow descended also, which seemed to stretch throughout the universe, surrounding His presence. Millions of angels circled at His feet singing praises and hymns of adoration.

Before His feet the seven blazing torches burned as seven columns of white fire, and in the midst of each torch were the flaming coals of the Spirit of Yehovah. The throne of His glory descended with Him. As it lowered, the floor of the throne room became as mercury, then morphed from the fluid metal into a sea that was as living, breathing sapphire. It was transparent, and there was no flaw within it.

Earsplitting peals of thunder seemed to shake the chamber so that the very atoms of the walls pulsated. And as the thunder subsided, blue lightning bolts, shot through with white fire, coursed through the Ancient of Days' cloak, lighting up the universe in their wake. Its circumference resembled the orbs of a thousand brilliant suns." [END OF EXTRACT]

So my question is could the universe as we know it represent something different to our eyes in a non fallen state? Maybe, but only time will tell.
